IETF 114

23-24 July 2022

Philadelphia, Pennsylvania

Hackathon Plan

- What drafts/RFC's were involved?
 - Hare issues
 - HKDF <u>RFC 5869</u>
 - AES-GCM <u>RFC 8452</u>?
 - EdDSA <u>RFC 7748</u> and <u>RFC 8032</u>
- Specific Problems
 - Implement encryption protocols in <u>Hare</u>

What got done

- Ideas:
 - Implement Ristretto in Hare, <u>currently in last call</u>
 - Implement AES-GCM-SIV, <u>RFC-8452</u> in Hare
- New code:
 - Start adding Ed25519 conformance tests to Hare

Conformance Test Results

What we learned

- Implemented in Hare
 - HKDF
 - Ed25519
 - Curve 25519
- Several AES-GCM ciphers
 - <u>AES-GCM</u> implemented
 - AES-GCM-SIV not yet implemented in Hare, example implementations
 - Rust
 - **C**
 - <u>Soatak</u> summarizes that AES-GCM is faster than AES-GCM-SIV but less secure
- Issues with existing drafts/RFCs
 - <u>Chalkias, Garillot and Nikolaenko</u> suggest improvements to RFC 8032 to enable use in contract sigining, electronic voting and transactions
 - <u>Henry De Valence</u> suggests standardizing signature <u>validity rules</u> for Ed25519
 - Chalkias, Garillo and Nikolaenko's test vectors should be added to those specified in RFC 8032
